`

Enterprise Resource Planning (ERP) is a business process management software. This is used by an organization to manage the office and automate the business functions. These system make the data easily accessible and more usable in terms or organization of files. ERP allows accurate planning by the company and have result oriented approach. The company can also schedule the daily activities with the help of ERP software solutions. It also helps in managing the finances well. These software play a very crucial role in the development of a company.

Now, as a part of research, prepare a case study of any company who have successfully implemented ERP. You may take reference of any newspaper, website and journal as well.

Your case study must have following touch points.

Touch Points
1. Introduction to company (organizational structure, culture, domain of service and so on)
2. Problems faced before implementing ERP
3. Direct benefits provided after implementation of ERP
4. Increased productivity and efficiency after implementing ERP
5. Risk and Challenges with implementation of ERP

Note: Extra Marks will be provided for proper reporting as well (includes formatting, language, facts, figures, charts, knowledge representation etc.).
